

The Illinois Commerce Commission is providing the links below to sources of information regarding electric service and forecasts of system reliability for the Summer of 1998.

Reliability is the responsibility of the individual electric utilities and their reliability councils.

This link to MAIN, Mid American Interconnected Network reliability council, will show MAIN's forecast concerning electric system reliability for today and tomorrow. Scroll to bottom of the page.

This link to NERC, the North-American Electric Reliability Council, will allow you access to its report on expected summer reliability for North America. NERC is the national reliability council that oversees several regional reliability councils. Most of Illinois is in the MAIN, Mid American Interconnected Network reliability council. Look for sections of the Summer Assessment report that concern MAIN for information about Illinois.

The following link is Illinois Power Company's response to the Commission's question: Please comment on the NERC 1998 Summer Assessment report sections regarding MAIN (including Appendix A) and the implications for IP and electric service customers in central Illinois. Illinois Power's response to NERC Summer Reliability Assessment

The following link is ComEd's response to the Commission's question: Please comment on the NERC 1998 Summer Assessment report sections regarding MAIN (including Appendix A) and the implications for ComEd and electric service customers in northern Illinois. Com Ed's response to NERC Summer Reliability Assessment
